

WHAT'S IN A DOMAIN NAME?

LRS® Web Solutions can help you manage the paid services that keep your website and email up and running.

DOMAIN NAME REGISTRATION

Website owners pay a registration fee to an accredited registrar, like Google Domains or GoDaddy, for the exclusive rights to use a specific domain name for a period from 1 to 10 years.

DNS HOSTING

Referred to as the address book of the internet, the Domain Name System (DNS) stores the IP address of your website's server, email server, and other online services. When a user types your domain name into their browser, the browser contacts the DNS host to find out where your website is hosted. This service may be bundled with your domain name registration.

WEB HOSTING

The web hosting provider stores all your website files on servers and makes them accessible to the internet. Monthly fees are usually dependent on a hosting plan's features and levels of service.

EMAIL HOSTING

Email hosting is a paid service that allows you to use your own custom domain name to create and manage email accounts. This service will store and handle your email accounts, allowing users to send and receive emails.
